TITLE: Medical service and prescription management system

Summary of Invention Paragraph:

[0005] As medicine has grown from a specialized profession into a full grown industry, the modern practice of medicine has evolved to include the interaction between a large number of individuals and organizations, each of which performs a role in patient care. Doctors and other medical professionals provide direct patient care such as diagnosis and writing prescriptions. Pharmaceutical companies research and develop new pharmaceutical treatments. Pharmacies stock and dispense medications based upon doctor's prescriptions. Health plan providers package and resell the services of various medical and pharmaceutical professionals, as well as providing an insurance function. Employers select and pay for health plans for their employees. Pharmacy Benefit Management companies (PBM's) provide aggregation and management to health plan providers when interacting with pharmacies.

Detail Description Paragraph:

[0063] With respect to the communication and storage of data, a patient's transaction data is preferably separated from the patient's identity information, in order to protect the patient's privacy, to guard against security breaches, and to comply with regulations. For example, the local server 116 sends a patient's prescription data to the health plan database 104 or the PBM database 106. The local server 116 also sends data about the patient's visiting session to the health plan database 104 to collect payment for the doctor from the health plan provider. The local server 116 may also send the patient's prescription data to a pharmacy database 110, and the pharmacy database 110 may send data to the health plan database 104 or the PBM database 106 to get reimbursement after the prescription is filled. For each of these communications of transaction data, the patient's name, address and other identity information are preferably excluded from the sent data. The patient is preferably identified by an identification code, such as an insurance number issued by the health plan provider. Many health plan providers issue an insurance card with an insurance number to each of its policy holders.
